CAREER OBJECTIVE

Recent IT major graduate seeking a Web Developer role to utilize acquired skills and pursue growth opportunities in a supportive company environment.

EDUCATION

Thu Duc College of Technology

Aug. 2021 – expected Dec. 2023

Major: Information Technology

Ho Chi Minh City, Viet Nam

- Coursework: Data Structures and Algorithms, Database Systems, Object-Oriented Programming, Front-End Web Development, Back-End Web Development, Application Development, Python Programming, Java Programming, Software Testing, Mobile Application Development (Android & IOS).

PROJECTS

Shoes Store

Dec. 2022 – Current

Personal project fostering skills growth in free time.

- Independently developed a comprehensive e-commerce website for shoe sales, featuring admin functionalities for product management, vouchers, and invoices, along with seamless browsing, cart functionality, payment processing, and shipping information collection for guest users.
- I enhanced my old project around 10 months prior, originally built with PHP and CSS, by refactoring all files to incorporate JavaScript and Blade templates. This upgrade improved the consistency and stability of the backend, enhanced the visual appeal of the frontend, and resulted in shorter, more understandable code.

Mobile Shop for smartphones

May 2023

Final project of Back-End Web Development course

- Collaborated with a team of 4 to build a website designed to assist companies in selling smartphones. Our website accommodates admin accounts with capabilities to manage products, vouchers, and invoices, while guest users can browse products, add items to their cart, make payments, and provide shipping information.
- Throughout the project, I honed my abilities in teamwork and collaboration, adeptly using Git commands to manage multiple branches. I also gained valuable experience in Laravel, front-end technologies (SASS, CSS, HTML, JS), back-end development with PHP, and database management using MySQL.

QuanLyBachHoaXanh

May 2022

Final project of Application Development course

- A WinForms management portal that empowers administrators to manage products, customers, and employees across various departments and positions. The portal enables efficient management of crucial data related to products, customer information, and employee records.
- I developed this project using C# (.Net) with MS SQL Server as the database, following a 3-layer architecture.

HONORS AND AWARDS

SCHOLARSHIP - Top 15 students achieving the highest marks in first semester

May 2022

ARI Technology Joint Stock Company

SKILLS

Tech Stacks: Backend (PHP, JavaScript), Frontend (HTML, CSS, JavaScript), Database (MySQL, MS SQL Server)

Frameworks/Libraries: .Net, Laravel, ReactJS

Programming languages: C#, Python, Java

Technologies/Systems: Git, Visual Studio, Android Studio
