Education

TON DUC THANG UNIVERSITY

Undergraduate, Computer Science. GPA :7.19/10

District 7, HCM

Expected Graduation Year: 2024

Technical Knowledge

Java: Spring boot API, implement JWT authentication and authorization, CRUD API

C#: Net framework MVC , Entity Framework for CRUD,

Javascript: Develop web application using Node.js, basic React JS knowledge (React state,effect)

Deployment: deploy a Node web application connect to MySQL database on VPS provided by AWS, Dockerized a Java Spring boot Application connect to MySQL and deploy to render.com.

Software Development Knowledge: Agile, Scrum

Reading Document: Reading document for solving specific problems and understanding frameworks

Language: English

Personal Project

(<https://github.com/accesable/Sale-of-points-Java>)

Point Of Sale in Java

11 2023– 12 2023

Deployment website: <https://java-pos.onrender.com/> it takes times to load due to limited deployment resources. Username/password for manger is: admin/admin | Username/password for employee is: lovecraftmad08/nhutanh123

- Use case: a website for employees and managers to process customer's transactions at a retail store.
- TechStack: Spring boot Restful API, MySQL, React JS, Docker for Deployment.
- My Responsibilities: Develop and design.
- What I have done:
 - JWT for authentication and authorization
 - Connecting MySQL using ORM hibernate
 - Dockized the project and pushed it to Docker hub for render.com deployment.
 - React as front-end for sending requests and receiving responds from Spring boot Restful API
 - Integrated Sending Email Service for user confirmation
 - Dockized the project and deploy to render.com and the application connect to MySQL instance provided by [Railway](#)

Group Project **(repository is in private)**

Point Of Sale in Node JS

11 2023– 12 2023

Deployment website: <http://hocnodecungcapasa.fun/> . Username/password is: admin/admin

- Use case: a website for employees and managers to process customer's transactions at a retail store.
- TechStack: Express, MySQL, Ajax
- My Responsibilities: Deploy the node application.
- What I have done:
 - Deploy as VPS on EC2 provided by AWS.
 - Use Nginx for forwarding the client request to the Node Application.

Personal Project

https://github.com/accesable/ASP.NET_Core_PhoneDistributor

Phone Distributor ASP.NET

7 2023 – Still Develop

- Use case: a website for employees, managers and distributors to process Phones distribution.
- TechStack: Asp.NET core MVC, MSSQL
- My Responsibilities: Develop and design.
- What I have done:
 - Develop CRUD based Entity Framework
 - Integrated Email Service
