Personality project
(June 2023 – July 2023)

Project Name	ANPHATPC
Description	Online sales system will be the solution for a best service for customers. With the development of digital technology and economic development, the number of people who own a computer or a smartphone is very normal. That's why it would be a big mistake not to capture this market. Therefore, the website selling electronic components Anphat Computer was born as an indispensable need to exploit the online market and give customers the best, fastest and most convenient service.
Team size	01
My position	C# Developer
My responsibilities	For customers • Building a website to meet the needs of all customers, even the most demanding customers. • With the application of IT features on the website, we will make a list of the best-selling products, the latest products to promote and orient customers with quality products, suitable for their needs. • Provide customers with the function to give opinions about products through yahoo, email and hotline. These can be considered as the most objective consulting tools to help buyers choose the best product for themselves. • Along with the ordering function and the fastest payment method, the website will save a lot of time for choosing and buying. Buying and selling will be more convenient with just one click. • Website provides source of information about products of clear origin and origin. Quality assurance of all items. • The product search function also helps customers to have a convenient and quick choice to buy the product they need the fastest. For system administrators • Can easily update hot and best-selling products according to

	customer trends. • Easily manage products, product categories • Easily find customer information, product information. • Update order status. • Generate statistical reports, give a list of best-selling items. • There must be a login mechanism to identify authorized people who can log in to the website's administration system. • Manage and update the status of the list of customer accounts. • Can assign permissions to Managers.. • Can backup, backup data of the website, ensure data safety.
Technologies Used	• ASP .NET • NodeJS • DB: Sql Server
